

An ultrashort fixed income strategy offering low correlation to short and core fixed income, with current yield, low interest rate sensitivity, and seeking to limit downside volatility.

FUND OVERVIEW

- The Semper Short Duration Fund seeks to provide a high level of current income and preserve capital.
- The Fund primarily invests in investment-grade, US dollar-denominated debt instruments of domestic entities, including US Treasuries, Agencies, Mortgage-Backed Securities, Asset-Backed Securities, and other short duration securities.
- The Fund has access to a Line of Credit provided by US Bank to use for redemption purposes.

GROWTH OF \$10,000 SINCE INCEPTION

This chart shows the performance of a hypothetical \$10,000 investment in the Fund on December 23, 2010, assuming reinvestment of dividends and capital gains. It does not imply any future performance.

FUND PERFORMANCE (as of 9/30/20)

Total Returns	3 Months	YTD ⁷	1 Year	3 Years	5 Years	Inception [^]

B.B. 1-3 Year Govt. Index	0.10%	3.09%	3.62%	2.66%	1.82%	1.37%
Excess Return	1.96%	-5.31%	-5.15%	-1.31%	0.00%	0.80%

Unless otherwise stated, all data is as of 9/30/2020. Performance data quoted represents past performance; past performance does not guarantee future results. [^]Fund inception date of investor and institutional shares was December 23, 2010. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 855-736-7799. Returns over one year are annualized. The adviser has contractually agreed to reduce and/or reimburse fees and expenses to limit total operating expenses, excluding acquired fund fees and expenses, interest, taxes, interest and dividends on securities sold short and extraordinary expenses, to 0.60%, at least through March 29, 2021. The net expense is what the investor would pay. The Institutional Share class (SEMIX) has no load; The Investor share class (SEMRX) is charged a 0.25% Rule 12b-1 distribution and service fee.

RISKS AND DISCLOSURES This material must be preceded or accompanied by a prospectus. Please refer to the prospectus for further details.

Mutual fund investing involves risk. Principal loss is possible. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher-rated securities. The Fund may make short sales of securities, which involves the risk that losses to those securities may exceed the original amount invested by the Fund. Investments in Mortgage-Backed Securities include additional risks that investors should be aware of such as credit risk, interest rate risk, prepayment risk, real estate market risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. The Fund may invest in securities that are less liquid which can be difficult to sell. The Fund may use certain types of investment derivatives such as futures, forwards, and swaps. Derivatives involve risks different from, and in certain cases, greater than the risks presented by more traditional investments. The Fund may use leverage which may exaggerate the effect of any increase or decrease in the value of portfolio securities. The Fund may invest in TBA securities which involve interest rate and investment exposure risks. The Fund may invest in When-Issued securities which may involve less favorable prices for securities, when delivered, and failure to deliver securities could cause a loss to the Fund. Sector allocations are subject to change and should not be considered a recommendation to buy or sell any security.

¹ Effective Duration: Calculation for bonds with cash flow variability. It takes into account that expected cash flows will fluctuate as interest rates change. ² Average Coupon: The weighted average of annual interest rate paid on the underlying securities, expressed as a percentage of the face value. ³ Standard Deviation: Calculated based on a rolling 3-year number and, when applied to the annual rate of return of an investment, is a statistical measurement that sheds light on the historical volatility of an investment. ⁴ Sharpe Ratio: The average return earned in excess of the risk-free rate per unit of volatility or total risk. ⁵ 30 Day SEC Yield is a standardized yield which is calculated based on a 30-day period ending on the last day of the previous month. It is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period. ⁶ The Bloomberg Barclays 1-3 Year Government Index includes Treasury and Agency securities issued by the U.S. Government with a maturity from 1 up to (but not including) 3 years. This unmanaged Index contains only dollar-denominated, investment grade issues with at least \$250 Million par outstanding. One cannot invest directly in an index. ⁷ Year To Date.

* Agency MBS includes Agency Credit Risk Transfer bonds, which are issued by but not guaranteed by Fannie Mae and Freddie Mac. Credit quality distribution is determined by using the highest credit rating for each security from Moody's, Standard & Poor's, Fitch Ratings, DBRS, Morningstar Credit Ratings, LLC and Kroll, six credit rating agencies providing credit assessments for mortgage-backed securities.
